A&G Graphics Interface
Smart Technology for Intelligent Developers

# Custom Voice™

## A Speech Recognition Custom Control for Visual Basic & Visual C++

## Product Summary

### Features

- ***Speech Recognition Custom Control*** — The heart of CustomVoice. Provides a simple, high-level interface to speech recognition via standard Visual Basic™ custom control properties, events and actions. All are fully compatible for use with Visual C++™, and Borland C++.

- ***Interactive Grammar Debugger*** — The tool helps the developer rapidly develop grammar (rules that direct the speech recognition engine to correctly identify valid spoken speech).

- ***A set of Parser API Functions*** — These functions enable easy conversion of recognized speech to data-types that are supported by Visual Basic™ and Visual C++™.

- ***A set of Pre-built Grammars for Common Data-types*** — The developer can cut and paste these ready built grammars (e.g. natural numbers, decimal numbers, time, date, etc.) into their own grammars and save time during development.

- ***Sample Custom Voice applications*** — Fully commented CustomVoice (Visual Basic & Visual C++) sample applications. Source code for these sample applications is also provided to illustrate the functionality of CustomVoice. Compile and distribute as is, or modify to create your own application. Developers can use these examples as a starting point for writing their applications.

- ***Full documentation & on-line help*** — Full documentation and on-line help ensure that all your questions are answered promptly. The product also comes with 30-Days of free technical support over the phone and support over Internet and Compuserv.

# Custom Voice™

## A Speech Recognition Custom Control for Visual Basic & Visual C++

## Product Competitive Position

- CustomVoice is the **first entry** of a Speech Recognition Development Tool based on the popular Visual Basic and C++ platforms. It has been designed with the developer's perspective in mind.

- CustomVoice is the **only** speech recognition custom control for Visual Basic, Visual C++ and Borland C++ that works with IBM Continuous Speech Series (ICSS): a speaker-independent, continuous-speech, large vocabulary and hardware-independent speech recognition system. Most competitive systems require proprietary DSP hardware.

- CustomVoice enhances IBM's speech recognition technology by adding features crucial to rapid prototyping and development of speech enabled applications. These features are delivered through a user friendly and easy to use object-oriented custom control.

- Future versions of CustomVoice will maintain the same look and feel, yet provide more flexibility by supporting multiple speech recognition engines, (IBM, VPC, BBN, Verbex, Dragon, Speech Systems Inc.) multiple development platforms, (Visual Basic 4.0, Visual C++ 2.0, Borland DELPHI, Borland C++) as well as popular automated-voice-response (AVR) and telephony platforms.

- A&G seeks to provide speech recognition application development tools that are **affordable** to more developers.

- A&G's expertise lies in the areas of speech recognition, voice response, client/server architecture, GUI design, GUI tools, and development platform tools. A&G is therefore uniquely qualified to deliver end-to-end consulting, training and product development support.

# Custom Voice™

## A Speech Recognition Custom Control for Visual Basic & Visual C++

## Company Profile

A&G Graphics Interface is a privately held firm based in Boston. It was founded in 1992 as a software consulting and systems integration company. Earlier this year, the company expanded its mission to include the production of software tools that will bring state-of-the-art technologies to the PC development environment. With A&G's combined expertise in the areas of speech processing and voice response, client/server architecture, GUI design, and object-oriented development tools; the company has announced its first product, **CustomVoice** - the most easy-to-use prototyping / development tool for today's speech recognition technology.

## Market Position

- CustomVoice's target market encompasses Windows developers, which includes the users of Microsoft Visual Basic, Visual C++, Borland C++, and IBM Continuous Speech Series (ICSS) speech recognizer.
- CustomVoice will be marketed via strategic alliance, direct sales and distributor sales.
- A&G maintains strategic relationships with the IBM Speech Group and the Microsoft Visual Basic ISV in promoting CustomVoice to their respective customer bases. CustomVoice will be displayed at trade shows and conferences, and is currently under review by major developer magazines, periodicals and catalogs.
- CustomVoice's direct sales channel includes on-line systems and services such as the Internet and Compuserv. A&G will be offering technical and sales support via these services. (Internet: customvc@world.std.com) Several developer/technical magazines, periodicals and catalogs will review and feature CustomVoice in their upcoming issues.
- A&G targets certain key distributors in the developer's tools market, in particular, catalog mail-order warehouses, and major resellers of ICSS, Visual Basic, Visual C++, and Borland C++.
- Marketing materials for CustomVoice include marketing brochures, product specifications and a CustomVoice demonstration diskette.

## Product Checklist √

**What should you look for in a Speech Recognition Development Tool?**

| Check For | Why? | Get it with CustomVoice |
|---|---|---|
| **Language Independence** | Why lock yourself into a proprietary language only to find the vendor hasn't added a feature or kept up with the competition | **CustomVoice is language independent. It works with the following industry standard development tools: Visual Basic, Visual C++, and others that support Visual Basic custom controls.** |
| **Rapid Development & Prototyping** | Most Speech Recognition systems come with their own development tools that are difficult to learn and use. | **CustomVoice provides a simple "*drag and drop*" graphical environment. You can put together a Speech Recognition applications in a few hours instead of a few weeks. Spend the rest of your time on more creative aspects of the development, e.g. user interface, etc.** |
| **Multi-Purpose and Flexible Speech Recognizer** | Why settle for limited speech recognition systems, requiring proprietary hardware, training by users (speaker dependent), support of small vocabularies only, or requiring discrete speech input. | **CustomVoice provides an interface and support to IBM Continuous Speech Series (ICSS) which is a *speaker-independent, continuous-speech, hardware-independent,* and *large-vocabulary* speech recognizer. Giving the developer maximum flexibility and performance.** |
| **Intuitive Debugging Facilities** | Many tools offer limited debugging. You need greater control over your application development to be able to identify problem areas more effectively | **CustomVoice comes with an Interactive Grammar Debugger, which adds value to ICSS by helping the developer write bug free and efficient grammar.** |

| | | |
|---|---|---|
| **User Friendly Interface** | Why would you want to spend more time figuring out how to set up the speech recognition engine for use? | **CustomVoice provides easy-to-use and user-friendly access to all ICSS variables and parameters. Developers can easily fine tune the speech recognition engine or use any of the ICSS functionality.** |
| **Established Customer base** | Why be the first to try unproved technology? | **Our customer list includes a large number of Fortune 500 companies, including Rockwell, Andersen Consulting, Ciba Corning, etc.** |
| **Many Success Stories** | You need to be sure that the tool of choice has been used in a wide variety of successful projects. | **CustomVoice has many successful applications we would love to tell you about. Once you become a customer, you can join in our Compuserv forum to exchange information and ideas with many other users.** |
| **Significant Number of Compelling Sample Applications** | The best way to learn is by looking at examples, modifying them for your own use. | **CustomVoice includes a wide range of sample applications, including a trading application, voice calculator, and more. The source code for these applications is included at no extra charge.** |
| **Strong Support Services** | Why go at it alone? | **CustomVoice comes with 30-days of free phone support to help you get started. Support is also available through Internet and Compuserv Forum. Consulting & training services are also available. .** |
| **5 Site Free Run-Time License** | Why commit before you are sure? | **Freely distribute the application you have developed to as many as 5 users without having to pay run-time fees. This gives you flexibility in developing and testing your application.** |
| **30 Day Money Back Guarantee** | Does your vendor have the confidence in their product to offer a no hassle return policy? | **With CustomVoice, there are no risks for you at all. We are confident you will be happy with the product.** |

# Custom Voice™

## Systems Requirements

### Hardware

- 486 DX PC 33mhz or faster with
  - 6 MB of RAM in excess of that required by operating system, and any other user applications (In general, 8MB of RAM is recommended.)
  - 15 MB of free disk storage space
- 8 or 16bit Audio Card, which may be one of the following
  - Sound Blaster (Pro, 16, and 16 ASP)
  - Pro Audio Spectrum 16
  - Sound Blaster Compatible
- An input microphone (preferably one that is super cardioid or unidirectional, noise canceling with an impedance of more than 600 ohms such as:
  - Sennhesier HMD410-6, MD518, or MD431U
  - Audio Technica
  - Conneaut Audio Devices CAD-89

### Software

- Microsoft Windows version 3.1 or higher
- IBM Continuous Speech Series for Windows Developer's Tool kit, Part # 79G9707
- Microsoft Visual Basic version 2.0 or higher, Standard or Professional Edition; or
- Microsoft Visual C++ version 1.0 or higher.
  Borland C++ version 4.0 or higher.

### Pricing

| | |
|---|---|
| **Custom Voice Development Tool kit**<br>Includes all the features mentioned above. | **$ 495.00** |

| | |
|---|---|
| **Custom Voice / IBM ICSS Bundle**<br>Includes all the features in Custom Voice with ICSS Developer's Kit. | **$ 695.00** |
